

INSTRUCTIONS ON HOW TO DOWNLOAD/INSTALL THE ALLOWANCE STANDARD RETRIEVAL SYSTEM (ASRS) DATABASE

DOWNLOAD

From <http://www.afcesa.af.mil/Directorate/CEO/Management/vehicles.htm> download the ZIPPED ASRS files.

1. When activated the system, before is actually downloads, will ask you where you want the file placed. Select C:\
2. The system will then download the files creating a folder in C:\ called ASRS.EXE.
3. Once downloaded (approx 5 min) go to file ASRS.exe located in C:\ and double click on the file.
4. Again the system will ask where you want the files to be located. Recommend you place the unzipped files on the largest drive you have available. Files are approx 300 Meg in size.
5. Select C:\
6. This time the system will unzip the files in ASRS.EXE under C:\ and create a folder called C:\ASRS.
7. Once files are unzipped close all programs and return to your desktop.
8. Click on start, then run, and then enter C:\asrs\inst\winstall.exe - (If you placed your ASRS file in "D" use "D" as the first character in all selections made from this point on.
9. Follow prompts until program has installed a file called "IDIPA" and "PFWRUN5" to the directory you chose.
10. Before closing the program group window drag the "Allowance STD Retrieval Sys" ICON to your desktop.
11. When completed close all windows and double click on the ASRS ICON and the program should load.

(The best way to learn the system is to feel your way around. You can't hurt the program, it will merely lock up and you can start over.)

NOTE:

If you should get a **BOLE16** error message when you first double click the ASRS ICON close the program window and from DESK TOP click on start, Programs, Runtime, Enhanced Users Manual. Go to **EDIT, FIND**, and type in **BOLE16**. Follow the directions copying the **BOLE16** file to the new location. The program should now work!!
